

AN INTERNSHIP REPORT

ON

WEB DEVELOPMENT

Submitted To

School of Computer Science and Engineering

IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of

B.Tech (Computer Science & Engineering) Core

By

SANSKAR RAI

Roll Number: 25SCS1003003573

Section: 2CSE33

Batch: 2025–2029

1. CANDIDATE'S DECLARATION

I, SANSKAR RAI, hereby declare that the internship report titled “Web Development” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. The report presents the work and learning completed during my virtual internship with CodSoft from 15 July 2026 to 15 August 2026.

I affirm that the work described in this report is based on my internship activities and project submissions. References and external resources used for understanding or implementation have been acknowledged. This report has not been submitted to any other institute for any degree or diploma requirement.

Signature:

Student Name: Sanskar Rai

Roll Number: 25scs1003003573

2. ACKNOWLEDGEMENT

I would like to express my sincere gratitude to everyone who supported me during my Web Development internship. The internship provided me with an opportunity to apply classroom concepts in practical projects and improve my understanding of front-end web development.

I am thankful to CodSoft for providing the internship opportunity and for the project-based tasks that encouraged me to work with HTML, CSS and JavaScript. I am also grateful to IILM University, Greater Noida, and the faculty of the School of Computer Science and Engineering for their academic support and encouragement.

I would also like to thank my parents, friends and everyone who encouraged me during the internship and helped me stay motivated while completing the assigned projects.

Signature:

Student Name: SANSKAR RAI

Roll No.: 25SCS1003003573

2. Acknowledgement
3. Internship Completion Certificate
4. Project Description
 - 4.1. Introduction
 - 4.2. Organization Profile
 - 4.3. Problem Statement and Industry Context
 - 4.4. Core Project Objectives
 - 4.5. Scope of the Internship
 - 4.6. Technologies and Tools Used
 - 4.7. System Architecture
 - 4.8. Methodology and Project Timeline
 - 4.9. Projects and Demonstrated Skills
 - 4.10. Expected Outcomes
 - 4.11. Certificates and Communication Proof
5. Bibliography/References

3. INTERNSHIP COMPLETION CERTIFICATE

The following certificate was issued by CodSoft confirming successful completion of the four-week virtual internship in Web Development from 15 July 2026 to 15 August 2026. The certificate is dated 16 August 2026.

INTERNSHIP OFFER LETTER

The internship offer letter confirms selection for the Web Development virtual internship at CodSoft and specifies the internship period as 15 July 2026 to 15 August 2026.

INTERNSHIP OFFER LETTER

Date : 13/07/2026

ID:BY26RY219648

Dear,

Sanskar Rai

We would like to congratulate you on being selected for the “Web Development” virtual internship position with “CodSoft”. We at CodSoft are excited that you will join our team.

The duration of the internship will be of **1 Month**, starting from **15 July 2026 to 15 August 2026**. The internship is an educational opportunity for you hence the primary focus is on learning and developing new skills and gaining hands-on knowledge. We believe that you will perform all your tasks/projects.

As an intern, we expect you to perform all assigned tasks to the best of your ability and follow any lawful and reasonable instructions provided to you.

We are confident that this internship will be a valuable experience for you, we look forward to working with you and helping you achieve your career goals.

By accepting this offer, you commit to executing assigned tasks diligently and ensuring excellence in all aspects of your work.

Best of Luck!

Thank You!

A handwritten signature in black ink, appearing to read "Rumash".

4. PROJECT DESCRIPTION

4.1 Introduction

This report presents an account of the four-week virtual Web Development internship undertaken with CodSoft from 15 July 2026 to 15 August 2026. The internship was designed around practical project development, allowing the intern to strengthen fundamental front-end development skills through progressively interactive tasks.

During the internship, three Level 1 projects were completed: a personal Portfolio Page, the Brightly Landing Page, and a Simple Calculator. The projects covered page structure, styling and responsive layouts, followed by JavaScript-based interaction and basic calculation logic.

The work was completed using dependency-free web technologies. The projects could be opened directly in a browser and were maintained as separate GitHub repositories, making the work easy to review and demonstrate.

4.2 Organization Profile

CodSoft is described in its internship material as an innovative technology education and software development platform focused on helping aspiring developers convert theoretical knowledge into practical expertise. Its ecosystem includes virtual internships, project-based learning and career-oriented tools.

The Web Development internship material emphasizes hands-on learning through practical tasks. For successful completion, interns are required to complete a selected task level, maintain a separate GitHub repository for their work, and provide a project demonstration through LinkedIn or the prescribed submission process.

- Organization: CodSoft
- Internship domain: Web Development
- Mode: Virtual internship
- Internship duration: 15 July 2026 – 15 August 2026
- Project level completed: Level 1
- Projects completed: Portfolio, Landing Page and Calculator

4.3 Problem Statement and Industry Context

A common challenge for beginners in web development is the gap between learning individual HTML, CSS and JavaScript concepts and using those concepts together to

build complete, usable web pages. Practical development also requires attention to layout, visual hierarchy, responsiveness, interaction, debugging and code organization.

The internship addressed this gap through a sequence of project-based tasks. The Portfolio task focused on structuring and presenting personal information; the Landing Page task focused on layout, sections, spacing and responsive design; and the Calculator task introduced JavaScript interaction, event listeners and conditional calculation logic. This progression provided a practical path from static page construction to interactive web functionality.

4.4 Core Project Objectives

- Strengthen practical knowledge of HTML5 semantic structure and page organization.
- Apply CSS3 concepts including Flexbox, Grid, spacing, colors, transitions and responsive design.
- Develop a personal portfolio page that organizes skills, certificates, education and contact information.
- Create a visually consistent landing page with header, hero, features, about, contact and footer sections.
- Implement a functional calculator using JavaScript event listeners, DOM interaction and basic conditional logic.
- Practice GitHub-based project organization and maintain separate repositories for the completed tasks.
- Improve debugging, problem-solving, layout design and basic project documentation skills.

4.5 Scope of the Internship

The scope of the internship was focused on beginner-level front-end web development. It covered static web page creation, responsive layouts, CSS-based visual design and introductory JavaScript interaction. The completed work did not require a backend server, database, authentication system or external JavaScript framework.

The scope was intentionally aligned with CodSoft's Level 1 tasks. The projects demonstrate foundational skills that can later be extended into larger full-stack

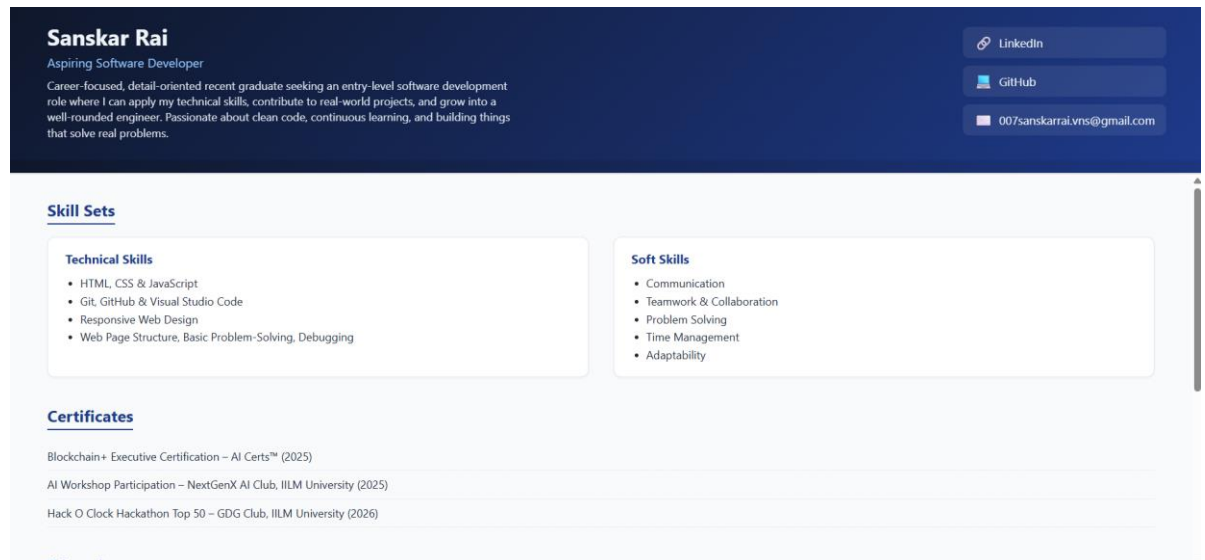

applications, but the completed internship work itself remained within the Level 1 requirements.

4.6 Technologies and Tools Used

Technology / Tool	Usage	Projects
HTML5	Semantic page structure, sections, forms/content and calculator markup	All three
CSS3	Layout, colors, spacing, Flexbox, Grid, transitions and responsive design	All three
Vanilla JavaScript	Event listeners, button actions, DOM interaction and calculation logic	Portfolio / Calculator
CSS Flexbox	Flexible layouts and responsive alignment	Portfolio / Landing Page
CSS Grid	Calculator button grid and structured layout	Calculator
Git & GitHub	Versioned project storage and separate repositories	All three
Visual Studio Code	Code editing and project development	All three
Web Browser	Local testing and visual verification	All three

4.7 System Architecture

The completed internship projects follow a simple client-side web architecture. HTML provides the structure, CSS controls presentation and layout, and JavaScript adds interaction where required. The browser loads the static files directly without a backend or database.

For the Portfolio Page, the project uses an HTML frameset shell that separates the top objective/social area from the main content area. Shared CSS provides the visual styling, while JavaScript is used only for the resume-button hook.

The Landing Page uses semantic HTML sections and CSS Flexbox. It contains a header, hero section, features section, about section, call-to-action/contact section and footer. A mobile media query adjusts navigation and heading size.

The Calculator uses an HTML display and button grid, CSS Grid for the button layout, and JavaScript for input handling and arithmetic operations. The implementation supports the four basic operations, decimal input, clear, delete and an equals action.

4.8 Methodology and Project Timeline

The internship methodology was project-based. Each task was developed, tested in a browser, documented through a README, and maintained in a separate GitHub repository. The exact day-by-day schedule was not provided in the internship documents; therefore, the timeline below represents the project-development sequence rather than an official CodSoft weekly schedule.

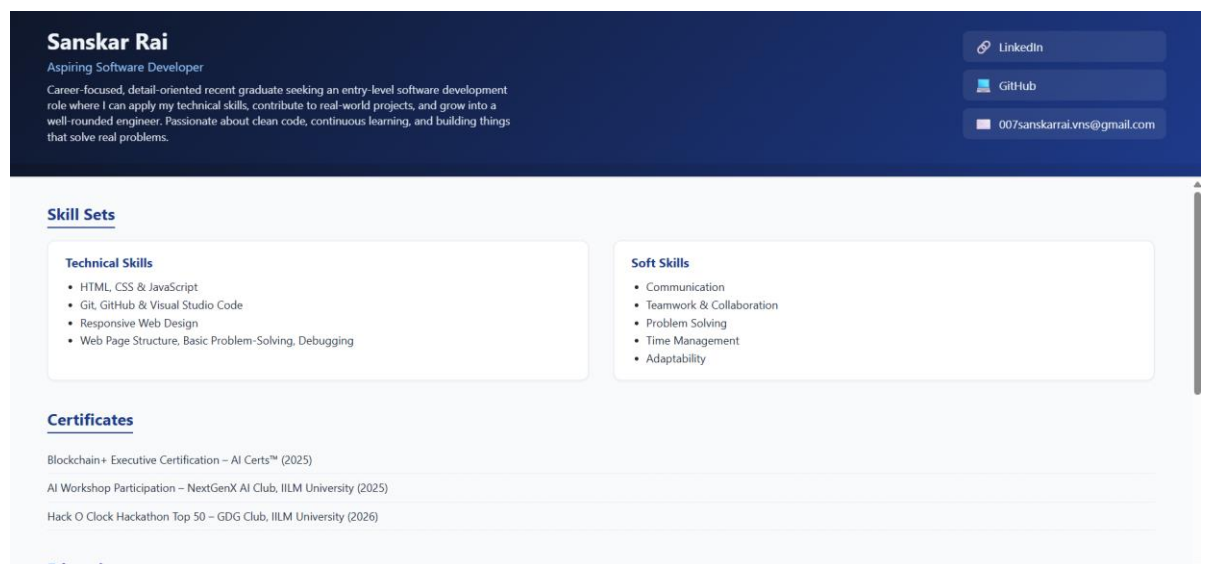

Phase	Focus	Main Work	Outcome
Phase 1	Portfolio	HTML structure, CSS styling, profile/skills/certificates/contact sections, resume link	Personal portfolio page
Phase 2	Landing Page	Header, hero, feature cards, about section, CTA, footer and responsive CSS	Brightly landing page
Phase 3	Calculator	CSS Grid interface, button event listeners, input handling, arithmetic and error handling	Functional calculator
Phase 4	Documentation & Verification	README documentation, browser testing, screenshots and GitHub repositories	Submission-ready project evidence

4.9 Projects and Demonstrated Skills

Project 1 – Personal Portfolio Page

The Portfolio Page was developed as a resume-style personal website. It presents the student's name and career objective, social links, technical and soft skills, certificates, education, contact information and a downloadable resume option.

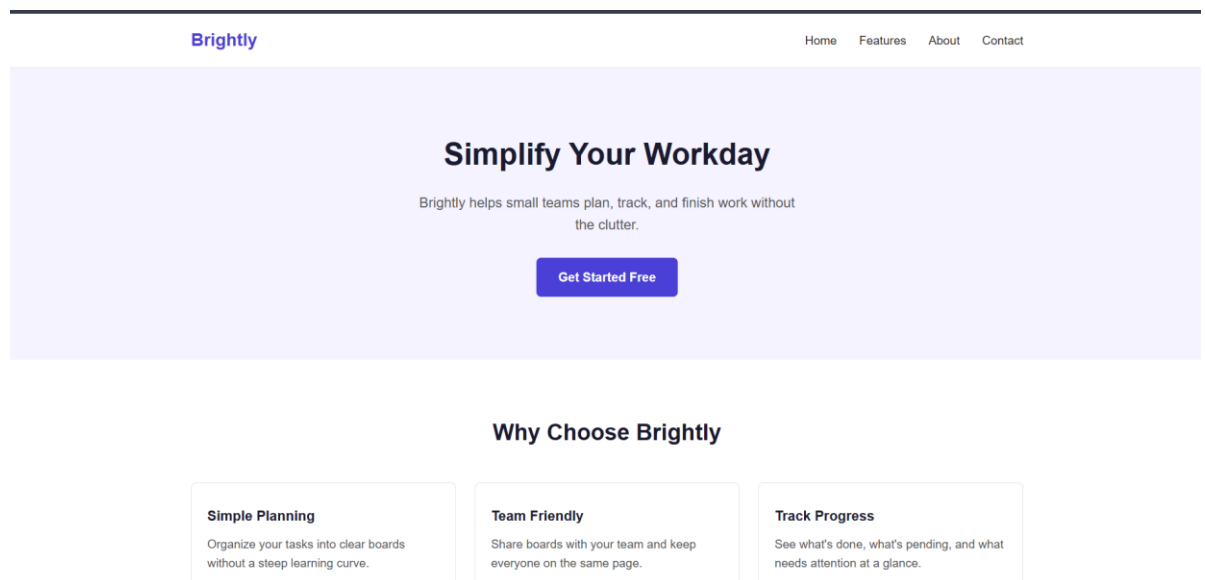

- Implemented with HTML5, CSS3 and a small JavaScript hook.
- Used a 30:70 frameset layout as a deliberate project design choice.
- Used Flexbox for flexible content arrangement within the frames.
- Included technical skills, soft skills, certificates, education and contact information.
- Maintained as a dependency-free static project.

Project 2 – Brightly Landing Page

Brightly is a responsive landing page designed around a simple productivity/workday concept. The page contains a navigation header, hero section with a call-to-action, three feature cards, an about section, a contact/CTA area and a footer.

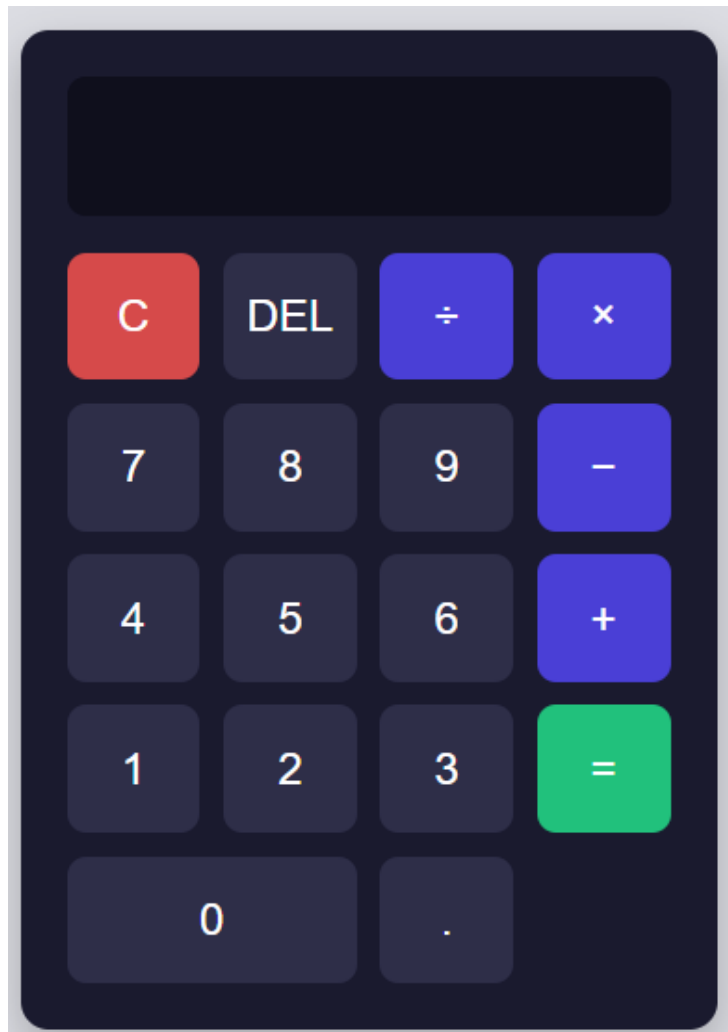

- Implemented using plain HTML5 and CSS3 without JavaScript or frameworks.
- Used Flexbox for page layout and feature-card alignment.
- Used a consistent purple accent color for branding and calls to action.
- Included a mobile breakpoint at 600px for responsive behavior.
- Focused on spacing, alignment, hierarchy, readability and visual consistency.

Project 3 – Simple Calculator

The Simple Calculator was the most interactive of the three projects. It provides a display and buttons for digits, decimal input, addition, subtraction, multiplication and division. It also includes clear and delete controls.

- Used CSS Grid to create the calculator button layout.
- Used JavaScript event listeners to handle button clicks.
- Used data-value and data-action attributes to distinguish inputs and actions.
- Implemented basic conditional logic for arithmetic operations.
- Added error handling for invalid expressions and division by zero.
- The current version intentionally handles one operator between two numbers at a time.

4.10 Expected Outcomes

- Improved confidence in building complete static websites from scratch.
- Better understanding of semantic HTML and structured web page design.
- Practical experience with CSS Flexbox, CSS Grid and responsive media queries.
- Improved understanding of JavaScript event listeners, DOM interaction and conditional logic.
- Experience organizing and documenting projects in separate GitHub repositories.
- Improved ability to test interfaces in a browser and identify layout or logic issues.
- A portfolio of three beginner-level projects demonstrating foundational web development skills.

4.11 Certificates and Communication Proof

The internship completion certificate issued by CodSoft states that Sanskar Rai successfully completed four weeks of a virtual internship program in Web Development from 15 July 2026 to 15 August 2026. The certificate is dated 16 August 2026.

The offer letter dated 13 July 2026 confirms selection for the Web Development virtual internship and specifies the one-month internship period from 15 July 2026 to 15 August 2026.

The CodSoft internship instructions also required interns to maintain a separate GitHub repository for their tasks and provide project demonstration/submission evidence. The three project repositories listed above provide the corresponding development records.
